DOB: 06/05/1957

Exam Date: 07/14/2022

JOHN MCGEE DO
14 BRUCKNER BLVD
BRONX, NY 10454**MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST**

INDICATION: Pain, MVA

COMPARISON: No prior study was available for comparison at the time of dictation.

TECHNIQUE: T1, T2, and PD, axial, coronal, and sagittal sequences were obtained.

FINDINGS:

Moderate AC joint arthrosis. Lateral downsloping acromion which may be causing impingement. High-grade partial articular sided tear of the supraspinatus tendon at the critical zone with tendinopathy of the remainder of the tendon. High-grade partial articular sided tear of the infraspinatus tendon at the critical zone insertion with tendinopathy. Tear of the long head of the biceps tendon from the biceps anchor. The tendon is not visualized, likely retracted distally. Intact subscapularis tendon. Tear of the superior and anterior labrum. Moderate size joint effusion. Mild subacromial bursitis.

No fracture. Bone marrow signal is normal. Glenohumeral cartilage is intact.

The inferior glenohumeral ligament is intact. Teres minor tendon is normal. No muscle atrophy.

IMPRESSION:

- High-grade partial articular sided tear of the supraspinatus tendon at the critical zone with tendinopathy of the remainder of the tendon.
- High-grade partial articular sided tear of the infraspinatus tendon at the critical zone insertion with tendinopathy.
- Tear of the long head of the biceps tendon from the biceps anchor. The tendon is not visualized, likely retracted distally.
- Tear of the superior and anterior labrum.
- Moderate size joint effusion. Mild subacromial bursitis.
- Moderate AC joint arthrosis.
