PATIENT NAME:	CHERYL WILLIAMS
REFERRING PHYSICIAN:	JURKOWICH
SERVICE:	MRI LEFT KNEE
DATE OF SERVICE:	06/21/2022

CLINICAL HISTORY: Pain.

TECHNIQUE: Multiplanar and multisequence images were obtained.

FINDINGS:

BONE MARROW AND OSSEOUS STRUCTURES: Multiple small osteochondral defects are seen predominantly at the lateral patellar facet. Differential diagnosis includes foci of osteochondritis dissecans versus osteochondral fracture.

LIGAMENTS AND TENDONS: The anterior cruciate, posterior cruciate, medial collateral and lateral collateral ligaments are normal. The quadriceps tendon and patellar tendons are unremarkable. The patellar retinacula are normal.

MENISCI AND JOINT SURFACES: The lateral meniscus is normal. Grade I signal posterior horn of the medial meniscus corresponds to mucoid changes. There is a trace suprapatellar effusion.

MUSCULATURE AND SOFT TISSUES: There is no evidence of soft tissue mass or abnormal signal intensity. No popliteal cysts are present.

IMPRESSION:

Trace suprapatellar effusion.

Multiple small osteochondral defects are seen predominantly at the lateral patellar facet. Differential diagnosis includes foci of osteochondritis dissecans versus osteochondral fracture. Please correlate clinically.

Grade I signal posterior horn of the medial meniscus corresponds to mucoid changes.
