PATIENT: CAMPBELL, ANDRE
FILE#: 042513
DOB: 09/19/1995
DOS: 07/22/2022
PHYSICIAN: DR. KOPACH, ALEKSANDR

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: There is an os acromiale present. There is no clavicle fracture or edema.

The supraspinatus, infraspinatus, and subscapularis tendons are intact. There is tendinosis of the supraspinatus and infraspinatus tendons with a partial tear of the distal bursal surface of the supraspinatus tendon. There is fluid present in the glenohumeral joint effacing the glenohumeral ligamentous complex. There is fluid distending the subacromial/subdeltoid bursa and there is fluid in the bicipital groove surrounding the biceps tendon sheath.

The humeral head is normal. There is no fracture or bone marrow edema. There is no acute labral tear.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

IMPRESSION:

1. OS ACROMIALE. NO FRACTURE OR EDEMA OF THE DISTAL CLAVICLE.
2. TENDINOSIS OF THE SUPRASPINATUS AND INFRASPINATUS TENDONS WITH PARTIAL TEAR OF THE SUPRASPINATUS TENDON WITH FLUID DISTENTION OF THE GLENOHMERAL JOINT AND THE PERI HUMERAL BURSA AS DESCRIBED.
3. BICEPS TENDINOSIS. NO FRACTURE OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
