

To: Davis, Gordon  
Exam: MRI LEFT KNEE  
Exam Date: 05/12/2022 11:03 AM  
Accession: 24049

Patient Name: Sutton, Reneva  
DOB: 07/17/1967  
Gender: F  
MRN: SutR4701

**LEFT KNEE MRI WITHOUT CONTRAST**

**HISTORY:** Left knee pain status post motor vehicle accident

**TECHNIQUE:** Multiplanar, multi-sequence MRI of the left knee was obtained without intravenous contrast.

**COMPARISON:** None available.

**FINDINGS:**

**LIGAMENTS:** The cruciate and collateral ligaments are intact.

**MEDIAL COMPARTMENT:** There is a complex tear at the posterior horn of medial meniscus with a full-thickness radial component. There is a horizontal cleavage tear of the medial meniscal body which is medially extruded. There is a 12 x 12 mm parameniscal cyst adjacent to the posterior horn/body junction of medial meniscus. There is chondral thinning on both sides of the medial compartment.

**LATERAL COMPARTMENT:** Intact lateral meniscus and articular cartilage.

**PATELLOFEMORAL COMPARTMENT:** There is a deep chondral fissure at the lateral patellar facet.

**MARROW:** Normal marrow signal.

**SYNOVIUM/ JOINT FLUID:** There is a moderate size joint effusion. There is a moderate sized popliteal cyst.

**MUSCLES:** No muscle edema or fatty muscle atrophy.

**NEUROVASCULAR STRUCTURES:** Normal in course and caliber.

**EXTENSOR MECHANISM:** There is insertional quadriceps tendinitis. There is tendinitis and enthesopathic spurring at the attachments of the patellar tendon.

**PERIPHERAL SOFT TISSUES:** Normal.

**IMPRESSION:**

Complex tear at the posterior horn and body of medial meniscus with a full-thickness radial

**HIGHLINE**  
RADIOLOGY

**Highline Radiology**

component at the posterior horn, medial extrusion of the body segment, and a 12 x 12 mm parameniscal cyst.

Moderate size joint effusion with a moderate sized popliteal cyst.

Deep chondral fissure at the lateral patellar facet. Medial compartment chondral thinning.
