

SKY RADIOLOGY

PATIENT NAME	BUN SEE, SATIE
D.O.B.	05/05/1985
PATIENT #	0000013339
DATE OF SERVICE	04/12/2022
REF. PHYSICIAN	RAHMAN, QUAZI MD

MRI OF THE RIGHT ELBOW WITHOUT CONTRAST

INDICATION: Right elbow pain

TECHNIQUE: T1, T2, and STIR weighted sequences were obtained.

COMPARISON: No prior studies were available for comparison at the time of dictation.

FINDINGS:

The common flexor tendon is intact. Tendinosis and partial interstitial type tear involving the more posterior fibers of the common tensor tendon origin (coronal image 5). Brachialis tendon is intact. Normal triceps tendon. Biceps tendon is intact.

The radial collateral ligament is intact. Annular ligament is intact.

No fracture. Joint spaces are preserved. No erosive change. Articular cartilage is intact. Alignment is normal.

The median, and radial nerves are normal in size and signal.

No significant effusion. Normal muscle signal.

The posterior fat pad along the undersurface of the triceps long, medial, and lateral head is preserved.

Olecranon bursa unremarkable.

IMPRESSION:

Tendinosis with interstitial type tear of the common extensor tendon origin

Thank you for this kind referral of this patient.
