CLINICAL HISTORY	C/O LT SHOULDER PAIN DUE TO MVA	GENDER	M

MAGNETIC RESONANCE IMAGING OF LEFT SHOULDER WITHOUT CONTRAST

HISTORY: Complains of left shoulder pain due to motor vehicle accident.

TECHNIQUE: Multiplanar, multi-sequence MRI of the left shoulder was performed without intravenous contrast.

COMPARISON: None available.

FINDINGS:

OSSEOUS STRUCTURES/MARROW: Normal marrow signal.

ROTATOR CUFF:

SUPRASPINATUS: There is a partial-thickness undersurface tear of the supraspinatus tendon (image 16, series 4).

INFRASPINATUS: The infraspinatus tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

TERES MINOR: The teres minor tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBSCAPULARIS: The subscapularis tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBACROMIAL/SUBDELTOID BURSA: No fluid in subacromial-subdeltoid bursa to suggest bursitis.

MUSCLES: No muscle edema or fatty muscle atrophy.

AC JOINT: Intact.

CLINICAL HISTORY	C/O LT SHOULDER PAIN DUE TO MVA	GENDER	M

BICEPS TENDON: Intact long-head of the biceps tendon.

LABRUM/LIGAMENTS: There is a tear of the superior glenoid labrum anterior to posterior (SLAP tear) with a partial tear of the biceps labral anchor complex.

CORACOACROMIAL LIGAMENT/ROTATOR INTERVAL: Rotator interval is normal.

GLENOHUMERAL CARTILAGE: Intact articular cartilage.

SYNOVIUM/JOINT FLUID: There is no joint effusion

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

1. Partial-thickness undersurface tear of the supraspinatus tendon.
2. Type II SLAP tear.
