PATIENT NAME: GLOVER, SHAMIKA
PATIENT DOB: 01/27/1987
CHART NUMBER: 045241
EXAM DATE: JUNE 22, 2022
REFERRING PHYSICIAN: DR. CLARKE, COLIN

MRI OF THE LEFT SHOULDER

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The acromioclavicular joint is intact. There is no fracture or edema of the distal clavicle. There is a down sloping acromion process, which may be impinging upon the supraspinatus muscle tendon complex.

There is moderate tendinosis of the supraspinatus tendon with partial tear of the bursal surface. There is tendinosis of the infraspinatus tendon. The subscapularis tendon is intact.

There is fluid present in the glenohumeral joint and the subacromial/subdeltoid bursa. Fluid is present in the bicipital groove surrounding the biceps tendon sheath.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

IMPRESSION:

1. DOWN SLOPING ACROMION PROCESS IMPINGING UPON THE SUPRASPINATUS MUSCLE TENDON COMPLEX.
2. TENDINOSIS AND PARTIAL TEAR OF THE BURSAL SURFACE OF THE DISTAL SUPRASPINATUS TENDON WITH FLUID IN THE SUBACROMIAL/SUBDELTOID BURSA AND GLENOHUMERAL JOINT.
3. BICEPS TENDINOSIS. NO FRACTURE OR ACUTE LABRAL TEAR.

Thank you for the courtesy of this referral.
