LEFT KNEE MRI WITHOUT CONTRAST

HISTORY: Left knee pain status post motor vehicle accident

TECHNIQUE: Multiplanar, multi-sequence MRI of the left knee was obtained without intravenous contrast.

COMPARISON: None available.

FINDINGS:

LIGAMENTS: The cruciate and collateral ligaments are intact.

MEDIAL COMPARTMENT: There is a horizontal cleavage tear of the medial meniscal body with a 1 mm intrameniscal cyst. There is 5 x 4 mm displaced meniscal flap within the intercondylar notch best seen on image 25 of the coronal PD fat saturated series 4. Intact articular cartilage.

LATERAL COMPARTMENT: There is a free edge radial tear at the anterior horn/body junction of lateral meniscus. Intact articular cartilage.

PATELLOFEMORAL COMPARTMENT: Intact articular cartilage.

MARROW: Normal marrow signal.

SYNOVIUM/ JOINT FLUID: There is small joint fluid.

MUSCLES: No muscle edema or fatty muscle atrophy.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

EXTENSOR MECHANISM: There is insertional quadriceps tendinitis. The patella tendon is preserved.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

Horizontal cleavage tear of medial meniscal body with a 1 mm intrameniscal cyst. Associated 5
