GREGORY ABRAMOV, N.P.
1314 CONEY ISLAND AVENUE
BROOKLYN, NY 11230

PATIENT: SAMMY NUNEZ
DOB: 11/07/1982
DOS: 05/25/2022
CHART #: 25067
EXAM: MRI OF THE LUMBAR SPINE WITHOUT CONTRAST

HISTORY: Pain.

TECHNIQUE: Multiplanar MR imaging of the lumbar spine was performed without contrast on Hitachi open MRI unit.

Sagittal and axial T1 weighted, sagittal STIR weighted and sagittal and axial T2 weighted images of the lumbar spine were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: There is no fracture or listhesis. There are no endplate changes. The pedicles are intact. The pars interarticularis is unremarkable. There is no stress reaction. Posterior elements are symmetric. The musculature is unremarkable. There is no paraspinal abnormality.

There is straightening of the lumbar lordosis. There is mild disc desiccation at the L5-S1 level. There is no stress reaction. Retroperitoneum is unremarkable. There is no solid organ injury.

Lower thoracic disc spaces are unremarkable. Conus medullaris is in normal position.

The L1-L2 and L2-L3 levels are unremarkable.

L3-L4: There is no central or foraminal stenosis.

L4-L5: There is no central or foraminal stenosis. There is no herniation. There is a disc bulge.

L5-S1: There is a diffuse disc bulge. A midline and bilateral paramedian herniation is seen. There is local mass effect upon the thecal sac.

EXAM: MRI OF THE LUMBAR SPINE WITHOUT CONTRAST

PAGE 2

Sacrum and SI joints are unremarkable. The upper pelvis is within normal limits.

IMPRESSION:

1. A MIDLINE AND BILATERAL PARAMEDIAN HERNIATION IS NOTED AT THE L5-S1 LEVEL, AS DESCRIBED. THERE IS LOCAL MASS EFFECT WITHOUT EVIDENCE OF STENOSIS.
2. DISC BULGES ARE SEEN AT THE L4-L5 AND L5-S1 LEVELS.
3. THERE IS NO FRACTURE OR LISTHESIS.

Thank you for referring this patient to us.
