PATIENT NAME: Joseph, Kesner  
DATE OF BIRTH: 5/06/65  
REFERRING PHYSICIAN: Dr. Stanley Kim  
DATE OF EXAM: 7/14/22

**MRI OF THE LEFT KNEE:**

**TECHNIQUE:** Sagittal, axial and coronal images of the left knee were performed using spin-echo and gradient echo pulse sequences.

**CLINICAL HISTORY:** Pain.

**FINDINGS:** Marrow signal is unremarkable. The distal femur and proximal tibia are intact. There is no osteonecrosis or fracture.

There is a joint effusion noted. Superficial varicose veins are noted.

There is quadriceps and patellar tendinosis/tendonitis. There is a supra and infrapatellar plica. There is no chondromalacia or mass in the posterior compartment.

There is anterior thickening, tearing and heterogeneity. The PCL is intact. There is partial LCL tear. The MCL complex is intact. The medial and lateral menisci are intact without evidence of tearing or morphology.

**IMPRESSION:**

1. Joint effusion.
2. Partial LCL tear.
3. Anterior thickening, tearing and heterogeneity.
4. Quadriceps and patellar tendinosis/tendonitis. Supra and infrapatellar plica.

Thank you for the courtesy of this consultation.
