PERVAIZ QURESHI, M.D.
79-09 B NORTHERN BLVD
JACKSON HEIGHTS, NY 11372

PATIENT: FRANK G. VENTURA

DOB: 07/07/2000

DOS: 06/30/2022

CHART #: 25266

EXAM: MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: Burning pain, numbness, worse when lying down.

TECHNIQUE: Multiplanar MR imaging of the right shoulder was performed without contrast on Hitachi open MRI unit.

Coronal T1, T2 and STIR; Sagittal T2; Axial PD and gradient echo images of the shoulder were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: The teres minor and subscapularis tendons are intact.

Mild tendinitis changes are seen at the supraspinatus and infraspinatus tendons. The musculotendinous junction is unremarkable. There is slight irregularity of the bursal surface anteriorly at the supraspinatus tendon. There is no impingement.

There is a type I acromion. There is no impingement or lateral downsloping. There is no muscular injury.

There is no fracture or bone bruise.

The glenoid is unremarkable. There is no subluxation. Morphology of the humeral head is unremarkable.

The anterior and posterior labra are intact. There is no attenuation. The superior labrum and biceps anchor are unremarkable.

There is no biceps tendon tear or tenosynovitis. There is no laxity or tear of the transverse humeral ligament.

The upper humerus is unremarkable.

There is no muscular injury. There is no hematoma or seroma.
