MRI OF THE RIGHT FOREARM

INDICATION: Pain.

TECHNIQUE: Multiple T1 and T2 weighted MRI images of the right forearm were obtained in axial, sagittal and coronal planes without intravenous contrast.

FINDINGS: No acute displaced fractures, dislocations, destructive bony lesions or marrow infiltration. The musculature of the right forearm is intact without tears, strains, atrophy, edema or fatty infiltration. No soft tissue lesions or fluid collections.

IMPRESSION:

1. No acute displaced fractures, dislocations, destructive bony lesions or marrow infiltration.
2. The musculature of the right forearm is intact without tears, strains, atrophy, edema or fatty infiltration
3. No soft tissue lesions or fluid collections.
