AJOY K. SINHA, M.D.
1314 CONEY ISLAND AVENUE
BROOKLYN, NY 11230

PATIENT: JULIO C. VELASQUEZ
DOB: 07/10/1983
DOS: 02/23/2022
CHART #: 24529
EXAM: MRI OF THE LEFT ANKLE WITHOUT CONTRAST

HISTORY: Pain, limited motion.

TECHNIQUE: Multiplanar MR imaging of the left ankle was performed without contrast on Hitachi open MRI unit.

Sagittal T1 and fat suppressed weighted images, axial proton density T1 and STIR weighted images and coronal STIR and T2 images of the ankle were obtained without IV contrast.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: The Achilles tendon is intact.

There is mild edema adjacent to the distal Achilles tendon. The plantar fascia is unremarkable. There is minimal edema seen at the subtalar joint. There is no fracture or bone bruise. There is no impaction. The talar dome is unremarkable. The deltoid ligament is unremarkable. The anterior tendon group shows no evidence of tear.

Mild tenosynovitis changes are seen at the posterior tibial tendon sheath.

The peroneal ligaments are unremarkable.

There is slight thinning of the anterior talofibular ligament laterally. A partial-thickness tear is noted.

There is a mild soft tissue contusion laterally over the hindfoot.

IMPRESSION:

1. A PARTIAL-THICKNESS TEAR IS NOTED Laterally AT THE ANTERIOR TALOFIBULAR LIGAMENT. THERE IS NO LAXITY.
