PATIENT NAME: OJYIEDE CAMPBELL  
REFERRING PHYSICIAN: PHYLLIS GELB  
SERVICE: MRI RIGHT ANKLE  
DATE OF SERVICE: 04/10/2022

---

MRI SCAN OF THE RIGHT ANKLE

CLINICAL HISTORY: Pain.

Routine non-contrast MRI images of the right ankle were obtained. Prior imaging correlation is not available.

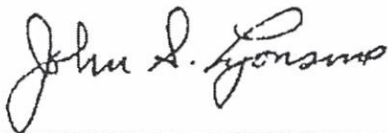

There is ankle joint fluid compatible with synovitis. The ankle mortise and subtalar joint are intact. There is no evidence of fracture, dislocation, or bone marrow abnormalities to be suspicious for bone contusion, stress fractures, or acute trabecular microfractures.

The ATFL, CFL, deltoid ligament, and the remaining visualized ligamentous and tendinous structures and the plantar fascia are intact. The muscle, fat, and fascial planes are well maintained.

**IMPRESSION:**

**PRESENCE OF ANKLE JOINT FLUID COMPATIBLE WITH SYNOVITIS. IN THE GIVEN CLINICAL SETTING OF TRAUMA, THE STUDY IS OTHERWISE INCONCLUSIVE WHICH IMPLIES THE NEED FOR FURTHER CLINICAL INVESTIGATION.**

Thank you for the courtesy of this consultation.
