DENNY X. RODRIGUEZ, M.D.
4720 AVENUE N
BROOKLYN, NY 11234

PATIENT: PIERRE ETIENNE
DOB: 10/08/1953 DOS: 07/18/2022 CHART #: 4196
EXAM: MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: Shoulder pain radiating down the arm, limited range of motion, clicking.

TECHNIQUE: Multiplanar MR imaging of the right shoulder was performed without contrast on Hitachi open MRI unit.

Coronal T1, T2 and STIR; Sagittal T2; Axial PD and gradient echo images of the shoulder were obtained.

COMPARISON: None.

FINDINGS: There is linear increased signal in the distal aspect of the infraspinatus tendon suggesting a partial non-retracted articular surface tear.

The supraspinatus, long head of the biceps and subscapularis tendons are normal in signal and appearance.

There are subchondral changes in the glenohumeral joint. Fluid is identified in the subacromial/subdeltoid bursa.

The glenoid labrum and rotator cuff interval demonstrate no abnormality.

The rotator cuff muscles are normal in signal and appearance.

IMPRESSION:

1. PARTIAL NON-RETRACTED ARTICULAR SURFACE TEAR OF THE DISTAL ASPECT OF THE INFRASPINATUS TENDON.
2. FLUID IN THE SUBACROMIAL/SUBDELTOID BURSA.

Thank you for referring this patient to us.
