PATIENT NAME: TEJADA, ALEJANDRO
DATE OF BIRTH: 01/10/1961
MRN #: BR48192
DATE OF SERVICE: 09/12/2022 03:01:13 PM
REFERRING PHYSICIAN: COLIN CLARKE, MD

MRI EXAM OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: Left shoulder pain.

TECHNIQUE: MRI exam of the left shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left shoulder is intact. There is no fracture. There are superior and inferior osteophytes at the acromioclavicular joint. Inferior osteophytes cause encroachment of the rotator cuff.

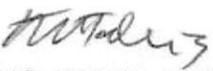

There is tendinopathy and tear of the supraspinatus tendon as seen in the distal portion of the tendon approximately 1.5 cm from the attachment on the greater tuberosity of the humerus. There is fluid in the subacromium and subdeltoid bursa. Infraspinatus and teres minor are intact. There is tendinopathy of the subscapularis tendon.

The glenohumeral joint is maintained. The glenoid labrum are preserved. There is a joint effusion.

IMPRESSION:

1. No fracture; prominent osteophytes at the acromioclavicular joint.
2. Tendinopathy and tear of the supraspinatus tendon.
3. Tendinopathy of the subscapularis tendon.
4. Intact glenohumeral joint with effusion.

Thank you for the opportunity to participate in the care of this patient.
