Gender: M
MRN: DavJ5497

RIGHT SHOULDER MRI WITHOUT CONTRAST

HISTORY: Right shoulder pain status post motor vehicle accident

TECHNIQUE: Multiplanar, multi-sequence MRI of the right shoulder was performed without intravenous contrast.

COMPARISON: None available.

FINDINGS:

ROTATOR CUFF: There is supraspinatus and infraspinatus tendinitis. The subscapularis and teres minor tendons are intact. There is no rotator cuff tear.

MUSCLES: No muscle edema or fatty muscle atrophy.

AC JOINT: Intact. There is an anteriorly curved acromion with subacromial spurring which contribute to rotator cuff impingement. There is subdeltoid/subacromial bursal fluid consistent with bursitis.

BICEPS TENDON: Intact long head of the biceps tendon.

LABRUM/LIGAMENTS: No labral tear.

GLENOHUMERAL CARTILAGE: Intact articular cartilage.

SYNOVIUM/JOINT FLUID: No joint effusion or synovial thickening.

MARROW: Normal marrow signal.

NEUROVASCULAR STRUCTURES: Normal in course and caliber.

PERIPHERAL SOFT TISSUES: Normal.

IMPRESSION:

Supraspinatus and infraspinatus tendinitis. Evidence of rotator cuff impingement secondary to anteriorly curved acromion and subacromial spurring. Associated subdeltoid/subacromial bursitis.
