

Exam requested by:
Marc LEVINSON MD
1888B WESTCHESTER AVE
BRONX NY 10472

SITE PERFORMED: LHR MERRICK
SITE PHONE: (631) 277-1600

Patient: MENDEZ, ISMAEL
Date of Birth: 03-20-2001
Phone: (929) 297-3382
MRN: 13467811R Acc: 1021131962
Date of Exam: 12-06-2021

EXAM: MRI LEFT KNEE WITHOUT CONTRAST

HISTORY: Status post motor vehicle accident 9/11/2001

TECHNIQUE: Triplane MRI of the knee was performed with fat and water weighted pulse sequences.

COMPARISON: None.

FINDINGS:

There is a small joint effusion. There is a small popliteal cyst.

There is no evidence of occult fracture, bone contusion or avascular necrosis.

The articular cartilages appear preserved.

There is a partial tear of the medial collateral ligament. The cruciate and lateral collateral ligaments appear intact as do the extensor tendons of the knee. The muscles and other tendons of the knee are unremarkable.

There is parrot-beak tear of the anterior horn of the medial meniscus communicating with the superior and inferior articular surfaces. The lateral meniscus appears intact without suspicious signal changes for a tear.

IMPRESSION:

1. Small joint effusion with a small popliteal cyst.
2. Partial tear of the medial collateral ligament.
3. Parrot-beak tear of the anterior horn of the medial meniscus.

Thank you for the opportunity to participate in the care of this patient.
