Exam requested by:
GORDON DAVIS DO
1611 E NEW YORK AVE
BROOKLYN NY 11221

SITE PERFORMED: MILL BASIN
SITE PHONE: (718) 220-2500

Patient: HORTON, JAMES
Date of Birth: 10-19-1956
Phone: (917) 348-3095
MRN: 14749000R Acc: 1022897578
Date of Exam: 05-02-2022

EXAM: CT RIGHT SHOULDER WITHOUT CONTRAST

Note - This patient has received CT studies and Myocardial Perfusion studies within our network over the previous 12 month period.

HISTORY: Shoulder pain. Status post motor vehicle accident on 4/7/2022.

TECHNIQUE: Multiple axial CT images were obtained through the right shoulder without the use of intravenous contrast. Coronal and sagittal images were reconstructed from the axial data. One or more of the following dose reduction techniques were used: automated exposure control, adjustment of the mA and/or kV according to patient size, use of iterative reconstruction technique.

COMPARISON: None.

FINDINGS:

Osseous structures: No fracture or dislocation. Small cystic change on the greater and lesser tuberosities.

Joints: Mild to moderate osteoarthritis of the glenohumeral joint.

Mild to moderate osteoarthritis of the acromioclavicular joint.
Type III, anterior hooked acromion.
There is no obvious joint effusion.

Tendons and capsule: No rotator cuff or capsular thickening or obvious fat-filled or fluid-filled tears within the limits of CT technique.

Muscles: No selective muscle atrophy or attenuation abnormality. No mineralization.

Subcutaneous tissues: No edema or fluid collection. No mineralization.

Lung: Mild dependent atelectasis.

IMPRESSION: CT of the right shoulder demonstrates:

Patient: HORTON, JAMES
Date of Birth: 10-19-1956

1. No fracture.
2. Osteoarthritis of the glenohumeral and acromioclavicular joints.
3. Type III, anterior hooked acromion.
4. Small cystic change on the greater and lesser tuberosities, a finding sometimes seen with rotator cuff disease.

Thank you for the opportunity to participate in the care of this patient.
