INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Left knee pain.

HISTORY OF PRESENT ILLNESS: A 45-year-old right-hand dominant male involved in a motor vehicle accident on 08/07/2022. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the driver side rear. The airbags did not deploy. The EMS arrived on the scene. The police were called to the scene of the accident. The patient went by car to Montefiore Medical Center and was treated and released the same day. The patient presents today complaining of left knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 2.5 months with little relief.

WORK HISTORY: The patient is currently working.

PAST MEDICAL HISTORY: Noncontributory. There is no previous history of trauma.

PAST SURGICAL HISTORY: Noncontributory.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient is a nonsmoker. The patient does not drink alcohol. The patient does not use recreational drugs.

ADL CAPABILITIES: The patient states that he can walk for 1/2 block. He can stand for 5 minutes before he has to sit. He can sit for 5 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states

that he is unable to do the following activities: carrying heavy objects, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging, and exercising.

PRESENT COMPLAINTS: Left knee: Left knee pain is 6/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has no difficulty rising from a chair and has difficulty going up and down stairs. Worse with range of motion and improves with rest.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.

Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

GU: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders.

Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 5 feet 9 inches, weight is 170 pounds, and BMI is 25.1. The left knee reveals tenderness along the lateral joint line and popliteal fossa. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative McMurray test. Negative Lachman test. Positive patellofemoral grinding test. Negative anterior drawer. Negative posterior drawer. Range of motion reveals flexion 105/130 degrees and extension 4/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the left lower extremity.

DIAGNOSTIC TESTING: MRI of the left knee, done on 09/28/2022, shows moderate joint effusion.

ASSESSMENT:

1. M23.92 Internal derangement, left knee.
2. M25.462 Joint effusion, left knee.
3. S80.912A Injury, left knee.
4. M25.562 Pain, left knee.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for left knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.

5. Continue physical therapy for 2-3 months for the left knee. If no improvement in pain, will possibly consider injection.
6. Recommend steroid injections with pain management for left knee. The patient refuses due to side effects.
7. Follow up in 2-3 months.

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
