

PATIENT NAME: PENA MARIA  
REFERRING PHYSICIAN: DR. MATHEW

DOB: 12/17/1965  
DOS: 06/07/2022

**MRI OF THE LEFT KNEE**

**INDICATION:** Pain.

**TECHNIQUE:** Multiple T1 and T2 weighted MRI images of the left knee were obtained in the axial, sagittal and coronal planes without intravenous contrast.

**FINDINGS:** There are no acute displaced fractures, dislocations, destructive bony lesions or marrow infiltration in the distal femur, proximal tibia, fibula and the patella. The patellar retinacular are intact. The distal quadriceps tendon, the patellar tendon, the lateral collateral, the fibular collateral ligaments and the iliotibial band are intact. The ACL, the PCL, and lateral meniscus are intact.

The adjacent musculature is intact without strains, edema, atrophy or fatty infiltration. There are no masses or fluid collections.

There is oblique tear in the posterior horn of the medial meniscus. Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting. There are mild osteoarthritic changes.

**IMPRESSION:**

1. Oblique tear in the posterior horn of the medial meniscus.
2. Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting.
3. Mild osteoarthritic changes.
