POST-OPERATIVE NOTE

The patient is status post arthroscopy of the left shoulder on 05/20/2022 and comes today for postoperative follow-up.

The surgical site has healed beautifully.

10 weeks postop left shoulder arthroscopy. No local inflammation, but significant painful ROM.

The patient has pain 10/10.

There is no evidence of any drainage, redness, or discharge from the surgical site.

There is no swelling or edema.

There is no wound dehiscence or complications.

The patient is afebrile.

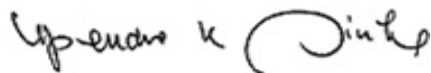

The patient may start home exercise program.

The patient was advised physical therapy 3 times a week for 6 weeks to regain full mobility of the left shoulder.

The patient is recently diagnosed with diabetes and is going to see PCP in 2 days.

Plan for blood work and MRI of the left shoulder.

The patient is to return to office in 4 weeks.
