BROOKLYN, NY 11206

Amended 06/08/2022 (Referring Physician)

MAGNETIC RESONANCE IMAGING OF THE RIGHT SHOULDER

TECHNIQUE: Multiplanar, multisequential MRI was performed in the 30-degree tilt position.

HISTORY: Patient complains of right shoulder pain.

INTERPRETATION: AC joint arthrosis. Nonunited os acromiale with spurring. No narrowing of the humeral-acromial interval. Narrowing of the supraspinatus outlet.

Infraspinatus tendinopathy. No muscle atrophy or tear.

Supraspinatus tendinopathy. No muscle atrophy or tear.

Biceps is intact in the groove and at the anchor. No tenosynovitis.

Subscapularis tendinopathy and fraying. No muscle atrophy or tear.

Anterior capsular thickening. Posterior capsule is intact.

Posterior inferior labrum is intact. Anterior inferior labral degeneration. Superior labral degeneration.

No fracture, dislocation, or erosion. Glenohumeral joint effusion.

IMPRESSION:

- AC joint arthrosis with united os acromiale and narrowing of the supraspinatus outlet, which can be seen with impingement.
- Rotator cuff tendinopathy.
