#### MAGNETIC RESONANCE IMAGING OF LEFT SHOULDER WITHOUT CONTRAST

HISTORY: Pain.

TECHNIQUE: Multiplanar, multi-sequence MRI of the left shoulder was performed without intravenous contrast.

COMPARISON: None available.

#### FINDINGS:

OSSEOUS STRUCTURES/MARROW: Subchondral edema seen in glenoid bone.

#### ROTATOR CUFF:

SUPRASPINATUS: Articular surface partial tear for the length of 2mm in supraspinatus tendon.

INFRASPINATUS: The infraspinatus tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

TERES MINOR: The teres minor tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBSCAPULARIS: The subscapularis tendon maintains intact tendon fibers. No tendon retraction is found. No skeletal muscle atrophy is seen.

SUBACROMIAL/SUBDELTOID BURSA: Mild fluid in subacromial-subdeltoid and subcoracoid bursa

MUSCLES: No muscle edema or fatty muscle atrophy.

AC JOINT: Grade III AC joint injury. Types II slap tear.

BICEPS TENDON: Intact long-head of the biceps tendon.
