DOB: 03/20/1982  
Gender: F  
MRN: AugM7045

**LEFT KNEE MRI WITHOUT CONTRAST**

**HISTORY:** Left knee pain status post motor vehicle accident

**TECHNIQUE:** Multiplanar, multi-sequence MRI of the left knee was obtained without intravenous contrast.

**COMPARISON:** None available.

**FINDINGS:**

**LIGAMENTS:** There is an acute/subacute full-thickness tear of the anterior cruciate ligament. The posterior cruciate ligament is intact. There is a partial tear at the proximal attachment of the medial collateral ligament with surrounding soft tissue edema. The lateral collateral ligament is intact.

**MEDIAL COMPARTMENT:** There is hyperintense PD signal within the posterior medial meniscocapsular junction with widening of this space consistent with meniscocapsular junction separation. Intact articular cartilage.

**LATERAL COMPARTMENT:** Intact lateral meniscus and articular cartilage.

**PATELLOFEMORAL COMPARTMENT:** Intact articular cartilage.

**MARROW:** Normal marrow signal.

**SYNOVIUM/ JOINT FLUID:** There is a large joint effusion.

**MUSCLES:** No muscle edema or fatty muscle atrophy.

**NEUROVASCULAR STRUCTURES:** Normal in course and caliber.

**EXTENSOR MECHANISM:** The quadriceps tendon is intact. The patella tendon is preserved.

**PERIPHERAL SOFT TISSUES:** There is soft tissue edema about the knee.

**IMPRESSION:**

Full-thickness tear of anterior cruciate ligament. Sprain of medial collateral ligament.

**HIGHLINE**  
RADIOLOGY

**Highline Radiology**
