**PATIENT NAME:** GURLEY, WANDA  
**DATE OF BIRTH:** 05/30/1956  
**MRN #:** BR47442  
**DATE OF SERVICE:** 09/06/2022 01:20:42 PM  
**REFERRING PHYSICIAN:** COLIN CLARKE, MD

**MRI EXAM OF THE RIGHT SHOULDER WITHOUT CONTRAST**

**INDICATION:** PAIN.

**TECHNIQUE:** MRI exam of the right shoulder was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

**COMPARISON:** There are no prior exams for comparison.

**FINDINGS:** The right shoulder is intact. There is no fracture. There is subchondral cyst formation in the greater tuberosity of humerus. There are osteophytes at the acromioclavicular joint.

There is tendinopathy and partial tear of the supraspinatus tendon with increased signal intensity in the distal portion of the tendon on T2-weighted sequences. There is fluid in the subacromium and subdeltoid bursa. There is tendinopathy and partial tear of the infraspinatus tendon. There is tendinopathy of the subscapularis tendon.

The glenohumeral joint is maintained. The glenoid labrum are preserved. There is a joint effusion.

**IMPRESSION:**

1. No fracture; osteophytes at the acromioclavicular joint.
2. Tendinopathy and partial tear of the supraspinatus tendon and the infraspinatus tendon.
3. Tendinopathy of the subscapularis tendon.
4. Intact glenohumeral joint.
5. Effusion.

Thank you for the opportunity to participate in the care of this patient.
