PATIENT NAME KERR, HOWARD
D.O.B. 06/20/1994
PATIENT # 913
DATE OF SERVICE 7/22/2022 1:02:13 PM
REF. PHYSICIAN RYBSTEIN, MARC MD

MRI OF THE LEFT HIP WITHOUT CONTRAST

INDICATION: Left hip pain

TECHNIQUE: T1, T2, and STIR weighted sequences were obtained.

FINDINGS:

No fracture. The bone marrow signal is normal. The hip joint spaces are preserved. No significant effusion. Normal articular cartilage. Normal pubic symphysis. Normal lumbar spine. Normal sacroiliac joints. No erosive change.

Small joint fluid, with focal hyperintense signal and contour irregularity concerning for a somewhat blunted type injury and tear of the inferoposterior labrum. Series 4 image 8, series 7 image 12. The gluteal tendons are intact. No trochanteric bursitis. The iliopsoas, rectus femoris, and hamstring tendons are intact. No muscle edema. No joint effusion. The visualized sciatic nerve is normal in size and signal. No soft tissue abnormality of the pelvis.

IMPRESSION:

Small joint fluid, with focal hyperintense signal and contour irregularity concerning for a somewhat blunted type injury and tear of the inferoposterior labrum.

Thank you for this kind referral of this patient.
