PATIENT NAME: ALSAID, YEHYA
PATIENT DOB: 06/20/1976
CHART NUMBER: 044957
EXAM DATE: APRIL 27, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE LEFT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: The anterior and posterior horns of the medial and lateral menisci are normal in configuration. There is no acute medial or lateral meniscal tear. There is chondral thinning and subchondral signal abnormality in the anterior and articular aspect of the lateral femoral condyle. There is also some thinning of the cartilage in the articular aspect of the medial femoral condyle.

There is partial tear of the anterior cruciate ligament. The posterior cruciate ligament is intact. There is intraarticular joint fluid present.

The medial and lateral collateral ligaments are intact. The quadriceps tendon and patellar tendons are normal.

There is chondromalacia patella involving both the medial and lateral patellar facets. Fluid is present in the medial and lateral recesses of the suprapatellar bursa. There is no patellar fracture or dislocation.

There are no acute femoral, tibial, or fibular fractures. There is subchondral signal abnormality in the tibial plateau.

The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity. The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT.
2. PATELLOFEMORAL CHONDROMALACIA.
3. SUPRAPATELLAR AND INTRAARTICULAR JOINT EFFUSION.

Thank you for the courtesy of this referral.
