MAGNETIC RESONANCE IMAGING OF THE RIGHT WRIST

INDICATION: Right wrist pain and pressure.

TECHNIQUE: Axial, coronal, and sagittal T1, T2, and PD sequences were obtained in the neutral sitting position.

COMPARISON: There are no prior studies available for comparison at the time of dictation.

FINDINGS:

Partial tear of the volar component of the scapholunate ligament. Tendinopathy of the extensor carpi ulnaris tendon.

Osseous signal and morphology are otherwise unremarkable. There is no other evidence of significant effusion or focal mass or altered signal in the soft tissues. The radial and ulnar collateral ligaments and the area of the triangular fibrocartilage appear otherwise unremarkable. Flexor retinaculum is otherwise intact and there is no evidence of abnormal fluid in the superficial or deep flexor compartment.

IMPRESSION:

1. Partial tear of the volar component of the scapholunate ligament.
2. Tendinopathy of the extensor carpi ulnaris tendon.

Sincerely,

Priyesh Patel, MD
