Exam requested by:
GORDON DAVIS DO
1611 E NEW YORK AVE
BROOKLYN NY 11221

SITE PERFORMED: MILL BASIN

SITE PHONE: (718) 220-2500

Patient: ABDUR-RASHID, TALIB
Date of Birth: 04-18-1963
Phone: (917) 687-5563
MRN: 3013116DS Acc: 1022701899
Date of Exam: 04-20-2022

EXAM: CT LEFT KNEE WITHOUT CONTRAST

Note - This patient has received 0 CT studies and 0 Myocardial Perfusion studies within our network over the previous 12 month period.

HISTORY: Pain, MVA.

TECHNIQUE: Multiple axial CT images were obtained through the left knee without the use of intravenous contrast. Coronal and sagittal images were reconstructed from the axial data. One or more of the following dose reduction techniques were used: automated exposure control, adjustment of the mA and/or KV according to patient size, use of iterative reconstruction technique.

COMPARISON: None available.

FINDINGS:

Osseous structures/joints:

No fracture.

Severe cartilage thinning at medial compartment with subchondral sclerosis, subchondral cysts, and marginal osteophytes.

Moderate osteoarthritis at lateral compartment with mild to moderate joint space narrowing and small marginal osteophytes.

Mild osteoarthritis at patellofemoral compartment with small marginal osteophytes and preservation of joint space.

Small joint effusion.

Small corticated loose body abutting anterior aspect of medial tibial plateau.

Menisci:

No abnormal mineralization associated with medial or lateral menisci.

Ligaments and tendons:

Grossly unremarkable cruciate and collateral ligaments within the limits of CT technique. Grossly unremarkable visualized tendons.

Muscles:

Confidential

Patient: ABDUR-RASHID, TALIB
Date of Birth: 04-16-1963

Grossly unremarkable visualized muscles without attenuation abnormality.

Subcutaneous tissues:

Grossly unremarkable subcutaneous tissues.

IMPRESSION: CT of the left knee demonstrates:

No fracture.

Tricompartmental osteoarthritis, severe at medial compartment, moderate at lateral compartment, and mild at patellofemoral compartment.

Small joint effusion.

Small corticated loose body abutting anterior aspect of medial tibial plateau.

Thank you for the opportunity to participate in the care of this patient.
