Tel: (201) 261-7000 • Fax: (201) 261-7001

PATIENT NAME: SCOTT, MAKAYLYNN  
PATIENT DOB: 01/07/2008  
CHART NUMBER: 045094  
EXAM DATE: MAY 25, 2022  
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

**MRI OF THE LEFT SHOULDER**

**Clinical History:** Pain; s/p injury.

**Protocol:** T1 and T2 axial and sagittal images

**Findings:** The acromioclavicular joint is intact, but slightly widened. There is no fracture or edema of the distal clavicle.

The supraspinatus, infraspinatus, and subscapularis tendons are intact. There is a somewhat frayed appearance to the bursal surface of the distal supraspinatus tendon, a finding suspicious for partial tear.

The humeral head is normal in position and appearance. There is no fracture or bone marrow edema. The long head of the biceps tendon is normally situated in the bicipital groove.

The anterior and posterior labrum are intact. The inferior glenohumeral ligamentous complex is intact.

The visualized musculature is normal in signal intensity. There is no subcutaneous mass or abnormal fluid collection.

**IMPRESSION:**

1. WIDENING OF THE ACROMIOCLAVICULAR JOINT. NO FRACTURES OR EDEMA OF THE DISTAL CLAVICLE.
2. FRAYED BURSAL SURFACE OF THE DISTAL SUPRASPINATUS TENDON, A FINDING CONSISTENT WITH PARTIAL TEAR.

Thank you for the courtesy of this referral.
