James Keech

MR

RT-KNEE...

2022-10-27

CLINICAL INDICATION:

MVA, pain with decreased range of motion.

TECHNICAL FACTORS:

Noncontrast MRI of the right knee performed utilizing multiplanar and multisequence acquisition.

FINDINGS:

There is no fracture, dislocation or bone lesion. The bones and muscular structures demonstrate normal signal intensity. There is no muscular tear or evidence of hematoma formation.

Joint effusion is present. Retinacular ligaments are intact as is the quadriceps and patellar tendon.

Sprain injury is seen at distal cruciate ligaments. Collateral ligaments are intact. Horizontal tear is evident involving the posterior horn of the medial meniscus. Menisci are otherwise intact.

IMPRESSION:

- Horizontal tear is evident involving the posterior horn of the medial meniscus with joint effusion.
- Sprain injury is seen at distal cruciate ligaments.

We thank you for the courtesy of this referral and look forward to being of service to you in the future.
