PATIENT NAME:	LESTER R. NOBLE, Jr	DOB: 12/13/1990
MRN:	WD28182	ACCESSION #: 4358
REFERRING PHYSICIAN:	JORDAN FERSEL	
SERVICE:	CT SCAN KNEE LEFT W/O CONTRAST	
DATE OF SERVICE:	09/02/2022	

CT EXAM OF THE LEFT KNEE WITHOUT CONTRAST

INDICATION: Left knee pain.

TECHNIQUE: CT exam of the left knee was performed with sequential thin section axial images and coronal and

sagittal reconstructed images, evaluated for bone and soft tissue detail.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left knee is intact. There is no fracture. There is no destructive bone lesion.

The medial and lateral joint compartments are maintained with smooth articular margins. The patellofemoral joint

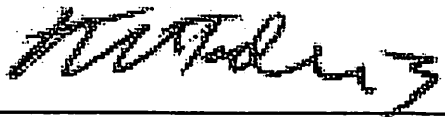

is maintained. There is osteophyte formation associated with the inferior margin of the patella. There is fragmentation of the anterior tibial tubercle, consistent with a chronic finding.

There is a knee effusion. There is no additional soft tissue abnormality.

IMPRESSION:

1. No fracture or focal bony lesion.
2. Intact medial and lateral joint compartments.
3. Inferior osteophyte formation associated with the patella and fragmentation of the anterior tibial tubercle as noted above.
4. Knee effusion.

Thank you for the courtesy of this consultation.

Stephen Toder, M.D.
