PERVAIZ QURESHI, M.D.  
79-09 B NORTHERN BLVD  
JACKSON HEIGHTS, NY 11372

PATIENT: BERTHA L. ZANABRIGA

DOB: 03/04/1971

DOS: 08/07/2022

CHART #: 25270

EXAM: MRI OF THE ~~LEFT KNEE WITHOUT CONTRAST~~

HISTORY: Superior lateral pain, anterior pain around the patella.

TECHNIQUE: Multiplanar MR imaging of the left knee was performed without contrast on Hitachi open MRI unit.

Coronal PD, T2 and STIR; Sagittal PD and PD fat suppressed; axial T2 and T2 fat suppressed of the knee were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: The quadriceps tendon is intact. The patellar tendon is unremarkable. There is a mild contusion over the patella. Large joint effusion is seen. Bone bruising is seen at the medial femoral condyle laterally and medially at the medial tibial plateau.

The lateral collateral ligament is unremarkable. There is a grade I to II injury of the medial collateral ligament.

Hoffa's fat pad is unremarkable. The PCL is unremarkable.

There is mild disorganization of the fibers of the ACL diffusely.

The lateral meniscus is unremarkable.

There is partial extrusion of the mid body of the medial meniscus. There is a complete tear of the meniscal femoral ligament.

Complex predominantly horizontal tear of the medial meniscus is seen from the anterior body to the posterior horn exiting inferiorly at the mid body and superiorly at the posterior body and horn. This could be moderately unstable.

There is no Baker's cyst. There is no muscular injury.

CHART #: 25270

EXAM: MRI OF THE LEFT KNEE WITHOUT CONTRAST

PAGE 2

### IMPRESSION:

1. A COMPLEX TEAR IS SEEN AT THE MEDIAL MENISCUS FROM THE ANTERIOR BODY TO THE POSTERIOR HORN, AS NOTED.
2. A TEAR OF THE MENISCOFEMORAL LIGAMENT IS SEEN, AS NOTED.
3. PARTIAL EXTRUSION OF THE MID BODY OF THE MEDIAL MENISCUS IS SEEN.
4. BONE BRUISING IS SEEN PREDOMINANTLY SURROUNDING THE MEDIAL COMPARTMENT.
5. THERE IS A GRADE I TO II INJURY OF THE MEDIAL LATERAL LIGAMENT.
6. A FOCAL CONTUSION IS SEEN OVERLYING THE PATELLAR TENDON.
7. A MODERATE TO LARGE REACTIVE EFFUSION IS SEEN.
8. AN INTERSTITIAL TEAR OF THE ACL IS NOTED, AS DESCRIBED.

Thank you for referring this patient to us.
