Exam requested by:
CATHY DELERME-PAGAN MD
106 PENNSYLVANIA AVE
BROOKLYN NY 11207

SITE PERFORMED: LHR LYNBROOK
SITE PHONE: (631) 277-1600

Patient: CARTER, LATASHA
Date of Birth: 09-06-1976
Phone: (516) 644-8019
MRN: 15546166R Acc: 1024357735
Date of Exam: 08-31-2022

EXAM: MRI RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: right shoulder pain.

TECHNIQUE: Multiplanar, multi-sequence MRI of the right shoulder was obtained on a 3T scanner according to standard protocol.

COMPARISON: None available.

FINDINGS:

Bones: No acute fracture or dislocation.

Rotator cuff: Full-thickness, full width tear of supraspinatus tendon extending into the anterior leading-edge fibers of the infraspinatus tendon. Retraction of torn tendon fibers to level humeral head (1.4 cm). Infraspinatus tendon is otherwise intact. Subscapularis tendon is normal. Teres minor tendon is intact.

Biceps tendon: Normal.

Acromion/Acromioclavicular joint: Mild acromioclavicular joint arthrosis with undersurface spurring. No os acromiale.

Bursae: Small fluid within the subacromial/subdeltoid bursa, consistent with full-thickness rotator cuff tear.

Labrum: Small undersurface tear at the superior labrum.

Glenohumeral joint: No joint effusion or synovitis. Articular cartilage is preserved.

Muscles: Rotator cuff muscles are normal without edema or significant asymmetric fatty atrophy. Deltoid is unremarkable.

Subcutaneous tissues: Unremarkable.

Patient: CARTER, LATASHA
Date of Birth: 09-06-1976

IMPRESSION: MRI of the right shoulder demonstrates:

1. Complete tear of supraspinatus tendon extending into the anterior infraspinatus tendon with retraction.
2. Small undersurface tear at the superior labrum.
3. Mild acromioclavicular joint arthrosis with undersurface spurring.
4. Mild subacromial/subdeltoid bursitis.

Thank you for the opportunity to participate in the care of this patient.
