**Bronx Diagnostic Radiology, P.C.**2500 St. Raymond Avenue  
Bronx, NY 10461Phone: (718) 369-1200  
Fax: (718) 223-2932PATIENT NAME: Melanie Espana  
DOB: 10/18/1991  
DATE OF SERVICE: 1/18/2022  
REFERRING DOCTOR: Adnan A. Qureshi, M.D.**MRI Right Wrist:**

TECHNIQUE: Magnetic Resonance Imaging is Performed in Multiple Projections Utilizing T1/T2 Pulse Sequences.

**FINDINGS:**

Carpal bone alignment is unrevealing. The triangular fibrocartilage complex is intact. Capsular thickening and/or capsulitis. Nonspecific bone cyst of the lunate. Common flexor tendons are large without any bulge of transverse carpal ligament and consistent with carpal tunnel syndrome. Hook of hamate unremarkable. Superficial flexor and extensor compartments are unremarkable. No bone marrow edema pattern is seen. The triangular fibrocartilage complex is small, but intact.

**IMPRESSION:**

1. Small triangular fibrocartilage complex.
2. Lunate cyst.
3. Some radiocarpal joint space narrowing.
4. Capsular thickening and capsulitis.
5. Some degree of fluid at the level of proximal carpal levels radially and ulnarly

Thank you for the courtesy of this consultation.
