MRI OF THE RIGHT KNEE WITHOUT CONTRAST

- Protocol: PD FSE COR FS; T2 FSE DE COR; T1 SE SAG; T2 SG TRS

Clinical history: Pain, s/p injury

Findings: There is a sprain or partial tear of the anterior cruciate ligament. The posterior cruciate ligament is normal. The medial and lateral collateral ligaments are intact.

The quadriceps tendon and the patellar tendons are normal.

There is a suprapatellar effusion and chondromalacia patella involving both the medial and lateral patellar facets. There is attenuation of the medial patellar retinaculum with lateral tracking of the patella. There is no patellar fracture or dislocation.

Normal signal is present in the femoral condyles and the tibial plateau. The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity and the popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF ANTERIOR CRUCIATE LIGAMENT.
2. LATERAL TRACKING OF THE PATELLA WITH SUPRAPATELLAR EFFUSION.
