PATIENT: JACKSON TASHAY
DOB: 01/17/1990
PHYSICIAN: DR. WALKER
EXAM DATE: 07/13/2022

MRI OF THE RIGHT HIP

INDICATION: Pain.

TECHNIQUE: Multiple T1 and T2 weighted MRI images of the hip were obtained in the axial, sagittal and coronal planes without intravenous or intraarticular contrast.

FINDINGS: There are no acute displaced fractures, dislocations, avascular necrosis or marrow infiltration. There are no significant soft tissue abnormalities. The muscles around the right hip are intact without tears, atrophy, edema, strains or fatty infiltration. The visualized portions of the bony pelvis are intact.

Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting.

IMPRESSION:

1. Mild joint effusion consistent with recent trauma or synovitis, in an appropriate clinical setting.
