INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Right shoulder and left knee pain.

HISTORY OF PRESENT ILLNESS: A 40-year-old right-hand dominant male involved in a motor vehicle accident on 11/17/2021. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the front driver's side and rear driver's side. The airbags deployed. The EMS arrived. The police were called to the scene of the accident. The patient did not go to any hospital that same day. The patient presents today complaining of right shoulder and left knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 3 months with little relief.

WORK HISTORY: The patient is currently working.

PAST MEDICAL HISTORY: Noncontributory.

PAST SURGICAL HISTORY: Right knee arthroscopy in 2009.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient is a nonsmoker. The patient does not drink alcohol.

ADL CAPABILITIES: The patient states that he can walk for 10 blocks. He can stand for 30 minutes before he has to sit. He can sit for 30 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: play sports, driving, reaching overhead and exercising.

PRESENT COMPLAINTS: Right shoulder: Right shoulder pain is 9/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness, popping, and clicking. The patient is able to reach overhead and behind the back and unable to sleep at night due to pain. Worse with range of motion and improves with physical therapy.

Left knee: Left knee pain is 3/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness. The patient has no difficulty rising from a chair and no difficulty going up and down stairs. Worse with range of motion and improves with medication.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.

Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

GU: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders.

Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 6 feet, weight is 230 pounds, and BMI is 30. The right shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, trapezius, and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 140/180 degrees, adduction 35/45 degrees, forward flexion 135/180 degrees, extension 45/60 degrees, internal rotation 65/90 degrees, and external rotation 60/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The left knee reveals tenderness along the lateral joint line. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Range of motion reveals flexion 110/130 degrees and extension 5/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the left lower extremity.

DIAGNOSTIC TESTING: MRI of the right shoulder, done on 01/23/2022, shows a bursal surface tear is seen posteriorly at the infraspinatus tendon, as noted. Mild tendinitis/bursitis changes are seen at the supraspinatus and infraspinatus tendons. There is no fracture. There is no bone bruise. There is no impingement. MRI of the left knee, done on 01/23/2022, shows an interstitial tear of the ACL is seen, as noted. There is a horizontal tear seen peripherally at the anterior horn of the lateral meniscus. Adjacent soft tissue reaction is seen. There is a grade injury

of the medial collateral ligament. Overlying edema is noted. Contusions are seen medially and laterally as well as overlying the retinacula and patellar tendon.

ASSESSMENT:

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.81 Shoulder tendinitis, right shoulder.
4. M75.41 Impingement, right shoulder.
5. M75.51 Bursitis, right shoulder.
6. M25.511 Pain, right shoulder.
7. S49.91XA Injury, right shoulder.
8. M25.411 Joint effusion, right shoulder.
9. S83.282A Lateral meniscal tear, left knee.
10. M23.92 Internal derangement, left knee.
11. S83.519A Anterior cruciate ligament tear, left knee.
12. S83.412A Medial collateral ligament sprain, left knee.
13. M25.462 Joint effusion, left knee.
14. S80.912A Injury, left knee.
15. M25.562 Pain, left knee.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder and left knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder and left knee 3 days/week.
6. Recommend steroid injections with pain management for right shoulder and left knee.
The patient refuses due to side effects.
7. Discussed right shoulder and left knee arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient would like to proceed with surgery.
8. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder and left knee pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.
9. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
10. All the benefits and risks of the right shoulder and left knee arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
11. All the questions in regard to the procedure were answered.
12. The patient verbally consents for the arthroscopy of right shoulder and the patient will be scheduled for right shoulder surgery. On the day of the surgery, before the procedure, the

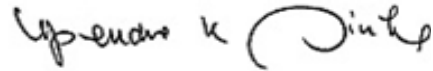

surgeon will explain all related questions of the procedure. The patient will sign a written consent and be witnessed by the surgeon. Call to schedule in about a week.

13. The patient will follow up 1-2 weeks postop or in 2 months if surgery has not been performed yet.

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
