PATIENT NAME:	LESTER R. NOBLE, Jr	DOB: 12/13/1990
MRN:	WD28182	ACCESSION #: 4357
REFERRING PHYSICIAN:	JORDAN FERSEL	
SERVICE:	CT SCAN SHOULDER LEFT W/O CONTRAST	
DATE OF SERVICE:	09/02/2022	

CT EXAM OF THE LEFT SHOULDER WITHOUT CONTRAST

INDICATION: Left shoulder pain.

TECHNIQUE: CT exam of the left shoulder was performed with sequential thin section axial images and with coronal and sagittal reconstructed images, evaluated for bone and soft tissue detail.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left shoulder is intact. There is no fracture. There is no destructive bone lesion.

There is sclerosis and irregularity of the articular margins at the acromioclavicular joint. There is inferior osteophyte formation.

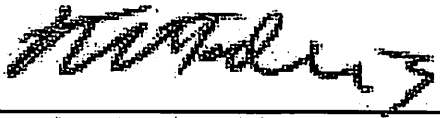

The glenohumeral joint is maintained with smooth articular margins. There are no erosive arthritic changes.

The rotator cuff maintains a normal thickness. There is no abnormal soft tissue calcification.

IMPRESSION:

1. No fracture or focal bony lesion.
2. Osteoarthritis involving the acromioclavicular joint as noted above.
3. Intact glenohumeral joint.
4. No abnormal soft tissue calcification.

Thank you for the courtesy of this consultation.

Stephen Toder, M.D.
