VALLEY STREAM, NY 11580

MAGNETIC RESONANCE IMAGING SCAN OF THE RIGHT KNEE

TECHNIQUE: Multiplanar, multisequential MRI was performed in the 30-degree tilt position.

HISTORY: The patient complains of right knee pain and difficulty walking.

INTERPRETATION: There is thickening and sprain of the medial collateral ligament extending to its femoral attachment site. There is free edge truncation and radial tearing with superimposed horizontal tear involving the body of the medial meniscus extending toward the body-anterior horn junction with posterior extrusion of the remnant outside the medial tibiofemoral joint compartment contributing to medial tibiofemoral joint space narrowing. There is edema surrounding the sprained medial collateral ligament at the level of the joint line surrounding the medial meniscal tear.

There is sprain of the anterior cruciate ligament with pericruciate edema with sprain extending to its femoral attachment site.

There is a paucity of patellofemoral synovial fluid and also synovial fluid anteriorly at the tibiofemoral articulation. There is edema in the prepatellar subcutaneous tissues.

Osseous signal and morphology are, otherwise, unremarkable. The lateral meniscus, lateral collateral ligament, posterior cruciate ligament, quadriceps and patellar tendons are, otherwise, unremarkable.

IMPRESSION:

- Thickening and sprain of the medial collateral ligament extending to its femoral attachment site. Free edge truncation and radial tearing with superimposed horizontal tear involving the body of the medial meniscus extending toward the body-anterior horn junction with posterior extrusion of the remnant outside the medial tibiofemoral joint compartment contributing to medial tibiofemoral joint space narrowing. Edema

surrounding the sprained medial collateral ligament at the level of the joint line surrounding the medial meniscal tear.

- Sprain of the anterior cruciate ligament with pericruciate edema with sprain extending to its femoral attachment site.
- Paucity of patellofemoral synovial fluid and also synovial fluid anteriorly at the tibiofemoral articulation. Edema in the prepatellar subcutaneous tissues.

Thank you for referring your patient to us for evaluation.

Sincerely,

Steven Winter, M.D.
