PATIENT NAME: FRIAS, EVARISTO
DATE OF BIRTH: 10/26/1958
MRN #: BR47043
DATE OF SERVICE: 05/02/2022 12:13:03 PM
REFERRING PHYSICIAN: JORDAN FERSEL, MD

MRI EXAM OF THE RIGHT SHOULDER WITHOUT CONTRAST

INDICATION: Right shoulder pain, evaluate for tear.

TECHNIQUE: MRI exam of the right shoulder was performed in sagittal, axial and coronal planes using T1 and T2 weighted sequences.

COMPARISON: There are no prior studies.

FINDINGS: The right shoulder is intact without fracture. There is deformity of the greater tuberosity of the humerus which may be related to prior trauma, with bone bruise. There are superior and inferior osteophytes at the acromioclavicular joint.

There is tendinopathy and partial tear of the supraspinatus tendon with increased signal intensity in the distal portion of the tendon on T2 weighted sequences. There is tendinopathy and partial tear of the subscapularis tendon. The infraspinatus and teres minor tendons are intact.

There is bone bruise in the glenoid. The glenohumeral joint is maintained. There is a tear of the inferior glenoid labrum at the 6 o'clock position. There is a joint effusion.

IMPRESSION:

1. Deformity of the greater tuberosity of the humerus and of the glenoid, which may be related to prior trauma, with associated bone bruises.
2. Tendinopathy and partial tears of the supraspinatus and subscapularis tendons.
3. Tear of the inferior glenoid labrum.
4. Effusion.

Thank you for the opportunity to participate in the care of this patient.
