PATIENT NAME: STEELE, PETER
PATIENT DOB: 07/20/1960
CHART NUMBER: 045090
EXAM DATE: MAY 25, 2022
REFERRING PHYSICIAN: DR.KOPACH, ALEKSANDR

MRI OF THE RIGHT KNEE

Clinical History: Pain; s/p injury.

Protocol: T1 and T2 axial and sagittal images

Findings: There is narrowing of the medial compartment of the right knee with tear of the posterior horn of the medial meniscus. The anterior and posterior horns of the lateral meniscus are normal in configuration. There is a sprain or partial tear of the medial collateral ligament. The lateral collateral ligamentous complex is intact.

There is partial tear of the anterior cruciate ligament with intraarticular joint fluid. The posterior cruciate ligament is normal in position and appearance. The quadriceps tendon and patellar tendons are normal.

There is lateral tracking of the patella and there is a suprapatellar effusion. The medial and lateral patellar facets demonstrate normal cartilaginous thickness and retinacular attachments.

There is no acute femoral, tibial, or fibular fracture. The popliteus tendon is intact. The gastrocnemius muscles are normal in signal intensity. The popliteal fossa is unremarkable.

IMPRESSION:

1. PARTIAL TEAR OF THE ANTERIOR CRUCIATE LIGAMENT.
2. SUPRAPATELLAR EFFUSION.
3. SPRAIN OR PARTIAL TEAR OF THE MEDIAL COLLATERAL LIGAMENT WITH TEAR OF THE MEDIAL MENISCUS.

Thank you for the courtesy of this referral.
