Accession:	28479	MRN:	MorK6167

**RIGHT KNEE MRI WITHOUT CONTRAST**

**HISTORY:** Right knee pain status post motor vehicle accident

**TECHNIQUE:** Multiplanar, multi-sequence MRI of the right knee was obtained without intravenous contrast.

**COMPARISON:** None available.

**FINDINGS:**

**LIGAMENTS:** There is hyperintense PD signal about the anterior cruciate ligament consistent with sprain sequelae. The posterior cruciate ligament is intact. The collateral ligaments are preserved.

**MEDIAL COMPARTMENT:** Intact articular cartilage. No medial meniscal tear.

**LATERAL COMPARTMENT:** There is a horizontal cleavage tear at the anterior horn and anterior body segment of lateral meniscus. There is an additional free edge radial tear at the lateral meniscal body. Intact articular cartilage.

**PATELLOFEMORAL COMPARTMENT:** Intact articular cartilage.

**MARROW:** There is marrow edema signal at the anterior aspect of the medial femoral condyle consistent with osseous contusion.

**SYNOVIUM/ JOINT FLUID:** There is small joint fluid.

**MUSCLES:** No muscle edema or fatty muscle atrophy.

**NEUROVASCULAR STRUCTURES:** Normal in course and caliber.

**EXTENSOR MECHANISM:** The quadriceps tendon is intact. There is moderate patellar tendinitis. There is edema within the superolateral Hoffa fat consistent with fat pad impingement.

**PERIPHERAL SOFT TISSUES:** Normal.

**IMPRESSION:**

Horizontal cleavage tear of the anterior horn and anterior body segment of lateral meniscus with

**HIGHLINE**

a superimposed free edge radial tear at the lateral meniscal body.

Osseous contusion at the anterior aspect of the medial femoral condyle.

Anterior cruciate ligament sprain sequelae.

Evidence of superolateral Hoffa fat pad impingement.

Moderate patellar tendinitis.
