PERVAIZ QURESHI, M.D.
79-09 B NORTHERN BLVD
JACKSON HEIGHTS, NY 11372

PATIENT: JORGE AGUSTIN BUNAY CANTOS
DOB: 03/14/1970
DOS: 12/21/2021
CHART #: 24239
EXAM: MRI OF THE RIGHT SHOULDER WITHOUT CONTRAST

HISTORY: Posterior pain.

TECHNIQUE: Multiplanar MR imaging of the right shoulder was performed without contrast on Hitachi open MRI unit.

Coronal T1, T2 and STIR; Sagittal T2; Axial PD and gradient echo images of the shoulder were obtained.

COMPARISON: None.

Additional sanitizing / safety protocols recommended by the CDC were performed.

FINDINGS: Moderate tendinitis/bursitis changes are seen at the supraspinatus and infraspinatus tendons. There is focal midsubstance tear proximally at the supraspinatus tendon anteriorly. There is no attenuation.

The subscapularis and teres minor tendons are intact. There is no subluxation. Glenoid is unremarkable.

The anterior and posterior labra are intact. A small joint effusion is seen.

There is a linear tear seen at the proximal biceps tendon involving the superior labrum anteriorly at the lateral aspect. There is no attenuation.

The superior labrum posteriorly is normal.

There is no muscular injury. There is no Baker's cyst. There is minimal fluid at the AC joint.

IMPRESSION:

1. A MIDSUBSTANCE TEAR IS SEEN ANTERIORLY AT THE PROXIMAL SUPRASPINATUS TENDON.
