Re: Cohen, Dionne
DOB: 10/04/1997
DOA: 09/24/2021

INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Right shoulder, left shoulder and right knee pain.

HISTORY OF PRESENT ILLNESS: A 24-year-old right-hand dominant female involved in a motor vehicle accident on 09/24/2021. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the rear side. The airbags did not deploy. The EMS did not arrive on the scene. The police were called to the scene of the accident. The patient was transported via ambulance to Long Island Jewish Medical Center and was treated and released the same day. The patient presents today complaining of right shoulder, left shoulder, and right knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 7 months with good relief.

WORK HISTORY: The patient is currently working.

PAST MEDICAL HISTORY: Noncontributory.

PAST SURGICAL HISTORY: Right ovarian cyst removal on 05/03/2022.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient is a nonsmoker. The patient drinks alcohol socially. The patient does not use recreational drugs.

ADL CAPABILITIES: The patient states that she can walk for 1 block. She can stand for 10 minutes before she has to sit. She can sit for 25 minutes before needing to change positions

secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that she is unable to do the following activities: play sports, driving, lifting heavy objects, carrying heavy objects, reaching overhead, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

PRESENT COMPLAINTS: Right shoulder: Right shoulder pain is 7/10, described as intermittent, sharp, stabbing, dull, achy pain. Worse with range of motion and improves with rest. The patient is able to reach overhead and behind the back and unable to sleep at night due to pain.

Left shoulder: Left shoulder pain is 10/10, described as constant, sharp, stabbing, dull, achy pain. Worse with range of motion and improves with rest. The patient is able to reach overhead and behind the back and unable to sleep at night due to pain.

Right knee: Right knee pain is 10/10, described as intermittent, sharp, stabbing, dull, achy pain. Worse with range of motion and improves with rest. The patient has difficulty rising from a chair and difficulty going up and down stairs. The patient also notes clicking, popping, buckling, and intermittent locking.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.

Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

GU: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders.

Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 5 feet 10 inches, weight is 195 pounds, and BMI is 28. The right shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, trapezius, and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 130/180 degrees, adduction 35/45 degrees, forward flexion 130/180 degrees, extension 40/60 degrees, internal rotation 65/90 degrees, and external rotation 60/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The left shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, trapezius and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Negative Hawkins test. Range of motion, as per goniometer, abduction 130/180 degrees, adduction 35/45 degrees, forward flexion 130/180 degrees, extension 40/60 degrees, internal rotation 65/90 degrees, and external rotation 40/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

The right knee reveals tenderness along the medial joint line and lateral joint line. There is no heat, swelling, erythema or deformity appreciated. There is crepitus appreciated. Negative McMurray test. Positive Lachman test. Positive patellofemoral grinding test. Positive anterior drawer. Negative posterior drawer. Range of motion reveals flexion 85/130 degrees and extension 3/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the right lower extremity.

DIAGNOSTIC TESTING: MRI of the right shoulder, done on 04/25/2022, shows malalignment of the AC joint and mild AC joint arthrosis with impingement. Fluid in the subdeltoid bursa and joint capsule compatible with tenosynovitis/bursitis with increased signal in the myotendinous supraspinatus for which clinical evaluation for superimposed acute strain/interstitial tear of the myotendinous supraspinatus is requested as discussed in the body of the report. MRI of the left shoulder, done on 04/29/2022, shows tendinosis of the supraspinatus insertion. Os acromiale with hypertrophic change and low-grade edema/stress reaction at the synchondrosis. Trace fluid in the subacromial bursa. MRI of the right knee, done on 04/08/2022, shows presence of joint fluid compatible with synovitis. In the given clinical setting of trauma, the study is otherwise inconclusive which implies the need for further clinical investigation.

ASSESSMENT:

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.81 Shoulder tendinitis, right shoulder.
4. M75.41 Impingement, right shoulder.
5. M65.811 Tenosynovitis, right shoulder.
6. M75.51 Bursitis, right shoulder.
7. M25.511 Pain, right shoulder.
8. S49.91XA Injury, right shoulder.
9. M89.311 Acromioclavicular joint hypertrophy, right shoulder.
10. M24.812 Internal derangement, left shoulder.
11. M75.82 Shoulder tendinitis, left shoulder.
12. M75.42 Impingement, left shoulder.
13. M25.512 Pain, left shoulder.
14. S49.92XA Injury, left shoulder.
15. M89.312 Acromioclavicular joint hypertrophy, left shoulder.
16. M25.412 Joint effusion, left shoulder.

17. M29.81 Internal derangement, right knee.
18. M25.461 Joint effusion, right knee.
19. S80.911A Injury, right knee.
20. M25.561 Pain, right knee.
21. M65.161 Synovitis, right knee.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder, left shoulder, and right knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder, left shoulder, and right knee 3 days/week.
6. Recommend steroid injections with pain management for right shoulder, left shoulder, and right knee. The patient refuses due to side effects.
7. Discussed right shoulder, left shoulder, and right knee arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient would like to proceed with surgery.
8. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder, left shoulder, and right knee pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.
9. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
10. All the benefits and risks of the right shoulder, left shoulder, and right knee arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
11. All the questions in regard to the procedure were answered.
12. The patient verbally consents for the arthroscopy of left shoulder and the patient will be scheduled for left shoulder surgery. On the day of the surgery, before the procedure, the surgeon will explain all related questions of the procedure. The patient will sign a written consent and be witnessed by the surgeon.
13. The patient will follow up 1-2 weeks postop or in 2 months if surgery has not been performed yet.

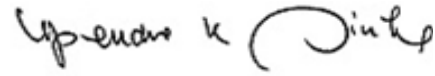

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby

affirm under penalty of perjury that the statements contained herein are true and accurate.
