---

UPENDRA SINHA, M.D.  
1314 CONEY ISLAND AVENUE  
BROOKLYN, NY 11230

PATIENT: RODOLFO ESTEBAN TAVAREZ RAMOS  
DOB: 10/22/1973  
DOS: 10/11/2021  
CHART #: 23764  
EXAM: MRI OF THE RIGHT KNEE WITHOUT CONTRAST

HISTORY: Weakness.

TECHNIQUE: Multiplanar MR imaging of the right knee was performed without contrast on Hitachi open MRI unit.

Coronal PD, T2 and STIR; Sagittal PD and PD fat suppressed; axial T2 and T2 fat suppressed of the knee were obtained.

COMPARISON: None.

FINDINGS: The patellofemoral compartment is unremarkable.

There is no chondromalacia. The medial and lateral retinacula are unremarkable. There is a moderate contusion over the patellar tendon. A small joint effusion is seen.

The quadriceps tendon is unremarkable.

The lateral collateral ligament is unremarkable. There is a grade I injury of the medial collateral ligament.

The PCL is unremarkable. There is no attenuation. There is diffuse prominent disorganization of the fibers of the ACL. There is moderate laxity at the mid aspect.

The lateral meniscus is unremarkable.

There is a horizontal tear exiting inferiorly seen at the mid and posterior body of the medial meniscus.

There is no muscular injury. There is no Baker's cyst.

Hoffa's fat pad is unremarkable.
