KOSTAS SCLAVOS, D.C.
1314 CONEY ISLAND AVE
BROOKLYN, NY 11230

PATIENT: MOHAMMAD BILAL
DOB: 03/12/1997 DOS: 06/24/2021 CHART #: 3567
EXAM: MRI OF THE THORACIC SPINE WITHOUT CONTRAST

HISTORY: Upper back pain, numbness, pain radiates down the spine.

TECHNIQUE: Multiplanar MR imaging of the thoracic spine was performed without contrast on Hitachi open MRI unit.

Axial T2, sagittal T1, T2 and STIR images of the thoracic spine were obtained.

COMPARISON: None.

FINDINGS: The alignment and vertebral body height in the thoracic spine is preserved.

The signal from the bone is normal.

There is no bone marrow edema or bony lesions identified.

The thoracic spinal cord is normal in signal and appearance.

Paravertebral soft tissues demonstrate no abnormality.

T1-T2, T2-T3, T3-T4, T4-T5 and T5-T6: No disc bulge or herniation, no spinal stenosis or neural foraminal narrowing.

T6-T7 and T7-T8: Central disc herniation with no associated spinal stenosis or neural foraminal narrowing.

T8-T9: No disc bulge or herniation, no spinal stenosis or neural foraminal narrowing.

T9-T10: Mild diffuse disc bulge, no spinal stenosis or neural foraminal narrowing.

T1-T11, T11-T12 and T12-L1: No disc bulge or herniation, no spinal stenosis or neural foraminal narrowing.
