PATIENT NAME: STEWART, DIAMOND
DATE OF BIRTH: 07/27/1988
MRN #: BR47847
DATE OF SERVICE: 09/12/2022 10:09:40 AM
REFERRING PHYSICIAN: JORDAN FERSEL, MD

MRI EXAM OF THE LEFT KNEE WITHOUT CONTRAST

INDICATION: NF. Left knee pain.

TECHNIQUE: MRI exam of the left knee was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: There are no prior exams for comparison.

FINDINGS: The left knee is intact. There is no fracture. There is no focal bony lesion.

The medial and lateral menisci are intact. The anterior and posterior cruciate ligaments are preserved. There is strain and partial tear of the medial collateral ligament at the attachment on the tibia with a small area of fluid density raising the question of pes anserine bursitis. The lateral collateral ligament is preserved.

There is narrowing of the patellofemoral joint with irregularity of the articular margins consistent with chondromalacia patella. There is a knee effusion. The patellar and quadriceps tendons are intact. There is pretibial bursitis.

IMPRESSION:

1. No fracture or focal bony lesion.
2. Intact menisci and cruciate ligaments.
3. Strain and partial tear of the medial collateral ligament with associated pes anserine bursitis.
4. Effusion.
5. Pretibial bursitis.

Thank you for the opportunity to participate in the care of this patient.
