Re: Calixte, Betchiny
DOB: 01/21/1996
DOA: 08/20/2022

INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Right shoulder and left knee pain.

HISTORY OF PRESENT ILLNESS: A 26-year-old right-hand dominant male involved in a motor vehicle accident on 08/20/2022. The patient was a pedestrian. The patient was crossing the street, car hit on right side of body. The EMS arrived on the scene. The police were called to the scene of the accident. The patient was transported via ambulance to New York-Presbyterian Hospital in Queens and was treated and released the same day. The patient presents today complaining of right shoulder and left knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 2 months with little relief.

WORK HISTORY: The patient is currently not working.

PAST MEDICAL HISTORY: Noncontributory. There is a previous history of trauma, MVA in 2019.

PAST SURGICAL HISTORY: Right shoulder arthroscopy in 2019 and right hand fireworks trauma second and third digit amputation in early 20s.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient is a nonsmoker. The patient drinks alcohol socially. The patient does not use recreational drugs.

ADL CAPABILITIES: The patient states that he can walk for 1/2 block. He can stand for 5 minutes before he has to sit. He can sit for 5 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: driving, lifting heavy objects, carrying heavy objects, reaching overhead, laundry, shopping, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

PRESENT COMPLAINTS: Right shoulder: Right shoulder pain is 6/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient is able to reach overhead, but is unable to reach behind the back. Worse with range of motion and improves with rest and physical therapy.

Left knee: Left knee pain is 6/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness. The patient has difficulty rising from a chair and has difficulty going up and down stairs. The patient also notes clicking and popping. Worse with range of motion and improves with rest.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing.

Cardiovascular: No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits.

GU: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders.

Psychiatric: No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 5 feet 9 inches, weight is 170 pounds, and BMI is 25.1. The right shoulder reveals tenderness to palpation over supraspinatus tendon region and proximal biceps tendon. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Positive O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 115/180 degrees, adduction 35/45 degrees, forward flexion 130/180 degrees, extension 45/60 degrees, internal rotation 40/90 degrees, and external rotation 55/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The left knee reveals tenderness along the superior pole of the patella and inferior pole of the patella. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative McMurray test. Positive Lachman test. Positive patellofemoral

grinding test. Positive anterior drawer. Negative posterior drawer. Range of motion reveals flexion 85/130 degrees and extension 4/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the left lower extremity.

DIAGNOSTIC TESTING: MRI of the right shoulder, done on 09/25/2022, shows supraspinatus and infraspinatus tendinitis with subdeltoid/subacromial bursitis. Tear at the base of the posterior glenoid labrum. Loculated fluid within the subscapularis recess. MRI of the left knee, done on 09/25/2022, shows focus of marrow edema signal at the medial femoral condyle likely representing osseous contusion. Anterior cruciate ligament sprain sequelae. Joint effusion. Interstitial tear of distal quadriceps tendon.

ASSESSMENT:

1. S46.011A Partial rotator cuff tear, right shoulder.
2. M24.811 Internal derangement, right shoulder.
3. M75.81 Shoulder tendinitis, right shoulder.
4. M75.41 Impingement, right shoulder.
5. M65.811 Tenosynovitis, right shoulder.
6. M75.51 Bursitis, right shoulder.
7. M25.511 Pain, right shoulder.
8. S49.91XA Injury, right shoulder.
9. M25.411 Joint effusion, right shoulder.
10. Tear of the posterior glenoid labrum, right shoulder.
11. M23.92 Internal derangement, left knee.
12. S83.512A Anterior cruciate ligament sprain, left knee.
13. M25.462 Joint effusion, left knee.
14. Tear of the distal quadriceps tendon, left knee.

PLAN:

1. Imaging studies and clinical examinations were reviewed with the patient.
2. All treatment options discussed with the patient.
3. Cold compresses for right shoulder and left knee.
4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
5. Continue physical therapy for right shoulder and left knee 3 days/week.
6. Recommend steroid injections with pain management for right shoulder and left knee. The patient refuses due to side effects.
7. Discussed right shoulder and left knee arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient would like to proceed with surgery.
8. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder and left knee pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.

9. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
10. All the benefits and risks of the right shoulder and left knee arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
11. All the questions in regard to the procedure were answered.
12. The patient verbally consents for the arthroscopy of left knee and the patient will be scheduled for left knee surgery. On the day of the surgery, before the procedure, the surgeon will explain all related questions of the procedure. The patient will sign a written consent and be witnessed by the surgeon.
13. The patient will follow up 1-2 weeks postop or in 2 months if surgery has not been performed yet.

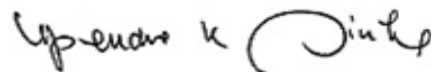

CAUSALITY: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
